

# Christmas Tree Safety

As you deck the halls this holiday season, be fire smart. A small fire that spreads to a Christmas tree can grow large very quickly.

## PICKING THE TREE

- »» Choose a tree with fresh, green needles that do not fall off when touched.

## PLACING THE TREE

- »» Before placing the tree in the stand, cut 1–2" from the base of the trunk.
- »» Make sure the tree is at least three feet away from any heat source, like fireplaces, radiators, candles, heat vents or lights.
- »» Make sure the tree is not blocking an exit.
- »» Add water to the tree stand. Be sure to add water daily.

## LIGHTING THE TREE

- »» Use lights that have the label of an independent testing laboratory. Some lights are only for indoor or outdoor use.
- »» Replace any string of lights with worn or broken cords or loose bulb connections. Connect no more than three strands of mini string sets and a maximum of 50 bulbs for screw-in bulbs. Read manufacturer's instructions for number of LED strands to connect.
- »» Never use lit candles to decorate the tree.
- »» Always turn off Christmas tree lights before leaving home or going to bed.

## AFTER CHRISTMAS

Get rid of the tree after Christmas or when it is dry. Dried-out trees are a fire danger and should not be left in the home or garage, or placed outside against the home. Check with your local community to find a recycling program. Bring outdoor electrical lights inside after the holidays to prevent hazards and make them last longer.

## FACTS

- ! **One-third** of home Christmas tree fires are caused by electrical problems.
- ! Each year, fire departments respond to roughly **260** structure fires that begin with Christmas trees.
- ! A heat source too close to the tree causes **one in every five** of the fires.
